

Amendments To The Claims

The Listing Of Claims will replace all prior versions, and listings, of claims in the application:

Listing Of Claims:

Claim 1 (Cancelled).

Claim 2 (Currently Amended): The packing ~~Packing~~ according to claim [[1]] 13, ~~characterized~~ in that the weakened zones on the packing lie in a line and ~~preferably in a line, in the area of an edge border or sealed edge border and~~ each has a width of 5 to 20 mm over the filing cavity.

Claim 3 (Currently Amended): The packing ~~Packing~~ according to claim [[1]] 13, ~~wherein characterized~~ in that the weakened zones on the packing lie in the area of an edge border or sealed edge border and/or in the area of the back side laminate material forming the back seam ~~two or more layers above each other due to sealing and/or folding~~ each has four lines of cuts.

Claim 4 (Currently Amended): The packing ~~Packing~~ according to claim [[1]] 13, ~~wherein characterized in that the packing has longitudinal edge borders or sealed edge borders and transverse edge borders or sealed edge borders and~~ each of two of the weakened zones are arranged in an area of a transverse edge border or sealed edge border and parallel to this transverse edge border or sealed edge border and extend through outer laver of the laminate.

Claim 5 (Currently Amended): The packing ~~Packing~~ according to claim [[1]] 13, ~~wherein characterized~~ in that each of the weakened zones are cut sequences or a multiplicity of individual cuts arranged in parallel, and ~~preferably~~

~~the cut direction of the individual cuts or cut sequences runs in the proposed tear direction with a space between the individual cuts of 0.1 to 1 mm.~~

Claim 6 (Currently Amended): A laminate ~~Laminate~~ material for production of the packing according to claim ~~[[1]]~~ 13, ~~wherein characterized in that the laminate material is film-like and multilayer and at least one material of the laminate material has no weakened zones and at least one material layer of the laminate material has weakened zones and the weakened zones on the packing made from the laminate material lie in the area of the sealed edges and/or in the area where the laminate material forms two or more layers above each other due to sealing or folding.~~

Claims 7 to 11 (Canceled).

Claim 12 (Currently Amended): A process of utilizing ~~Use of the~~ packing with a tear aid and with sealed edges from a ~~film-like~~ laminate material according to claim ~~[[1]]~~ 13 to hold liquid, pasty, powdery, granulated or solid fillings.

Claim 13 (Previous Presented): A packaging (16a), made from a multilayer film laminate material, with a first side, a second side, two longitudinal edges, a first and a second transverse sealed edge (17a), a longitudinal back seam (23), formed by overlapping two longitudinal edges of the laminate material, on the second side, and an internal filling cavity (21a), there are three weakened zones (20a) with a tear direction as a tear aid, two of the weakened zones (20a) are each located on and near one of the longitudinal edges of packaging (16a), near the first transverse sealed edge (17a) and extending onto the second side and the first side, there being substantial distance between any

two adjacent weakened zones (20a), third weakened zone (20a) is located on and extends transversely entirely across the longitudinal overlapped back seam (23) and near the first transverse sealed edge (17a), each weakened zone (20a) has a multiplicity of parallel rows of individual uninterrupted line cuts that run in the tear direction and that extend entirely across such weakened zone (20a), the weakened zones (20a) can each be located in same or different material of the laminate material, and at least part of each of the weakened zones (20a) lies in the area of the internal filling cavity (21 b).

Claim 14 (Previously Presented): A combination of the packing (16a) according to Claim 13 with liquid, pasty, powdery, granulated or solid filling in internal cavity (21a) of the packing (16a).

Claims 15 to 20 (Cancelled).

Claim 21 (New): The packing according claim 1, wherein the weakened zones on the packing lie in a line in the area of an edge border or sealed edge border have a width of 5 to 20 mm over the filling cavity.
